Qualifications

02/2018–03/2022 **Doctor of Philosophy**,
Faculty of Information Technology, Monash University
PhD thesis: Efficient Implementation Techniques for Lattice-based Cryptosystems

Selected Projects:

- **Discrete Gaussian Sampling Algorithms**
  - I created *two new* discrete Gaussian sampling algorithms. Discrete Gaussian sampling is a crucial algorithm used in post-quantum cryptography.
  - My algorithms are *faster*, consume *less* memory, and / or support a *wider* range of discrete Gaussian distributions, compared to previous techniques.
  - My techniques have been used by the FN-DSA post-quantum digital signature scheme, a pending standard by NIST.
- **Post-quantum Privacy Preserving Protocols**
  - I investigated the implementation aspects for post-quantum privacy preserving protocol primitives, in *ongoing* research collaborations with researchers in Monash University. These protocols are crucial for cryptocurrencies such as Monero and Algorand.
  - I developed *efficient* techniques and / or implementations for these cryptography primitives. My techniques are *faster* than previous post-quantum solutions for the same protocol.
  - Four media articles (1, 2, 3, 4) have been released by CSIRO and / or Monash University.

02/2016–12/2017 **Master of Networks and Security**,
Faculty of Information Technology, Monash University
Awards:
- Dux of Postgraduate (Master of Networks and Security), Cliff Bellamy Awards 2018, Monash University.

09/2011–06/2015 **Bachelor of Engineering**,
College of Computer Science & Technology, Zhejiang University, China

Employments

07/2025– **Chief Technology Officer, Co-founder**,
ExeQuantum

11/2022–06/2025 **Postdoctoral Fellow**,
Data61 Cybersecurity and Quantum Systems Group, CSIRO
Awards:
- iAwards 25 ACT Winner (Government & Public Sector).
- SCS Biannual Award, May 2024 (Early Career in Engineering Award).
- SCS Biannual Award, May 2023 (Engineering and Technology Award).

Selected Projects:

- **MIKA: A Minimalist Approach to Hybrid Key Exchange**
  - I worked with the Australian company Penten to develop a new framework for hybrid key exchange protocols. The framework achieves *minimal* modifications to the core codebase and the state machine of the protocol compared to existing solutions.
  - I developed and tested a proof-of-concept implementation of MIKA in the IPSec software strongSwan.
  - Our work won the iAwards 25 ACT (Government & Public Sector).
- **GPU-accelerated FN-DSA Digital Signature Scheme**
  - I created *new* techniques to solve the unique challenges of efficiently implementing the FN-DSA post-quantum digital signature scheme, a pending standard by NIST, on a GPU. My techniques increase the throughput of a crucial algorithm in FN-DSA by *ten times* on a GPU.
  - We developed *first* GPU-accelerated FN-DSA implementation with *high throughput*.
  - Monash University has released a media article.

08/2021–10/2022 **Research Assistant**,
Faculty of Information Technology, Monash University

Selected Projects:

- **Latte Hierarchical Identity-based Encryption**
  - I developed *first* complete optimised practical implementation of Latte, a post-quantum Hierarchical Identity-based Encryption scheme endorsed by ETSI.
  - I created *new* optimisation techniques for the algorithms in Latte. My techniques significantly *accelerate* the algorithms and *reduce* the communication costs. With my techniques, a crucial algorithm in Latte now only takes *less than a second* computational time on a desktop computer, significantly *faster* than the order of minutes previously estimated by ETSI.
  - Monash University has released a LinkedIn blog.
- **Implementation of Post-Quantum Algorithms for Bouncy Castle Library**
  - I was a Chief Investigator for the project of post-quantum cryptography integration in Bouncy Castle, an *Australian sovereign* software cryptography library.
  - I was part of the supervision team, providing cryptographic engineering insights and guidance to four research assistants.
  - I have been recognised as Contributor of Bouncy Castle.

02/2018–10/2022 **Teaching Associate**,
Faculty of Information Technology, Monash University

06/2017–11/2017 **Research Assistant**,
Faculty of Information Technology, Monash University

Selected Projects:

- **Titanium Key Encapsulation Mechanism**
  - I developed an *efficient* and *secure* software implementation of Titanium, a new post-quantum Key Encapsulation Mechanism designed by Monash University.
  - I created *new* techniques to significantly *accelerate* its arithmetic computations.
  - My implementation has been submitted to the Post-Quantum Cryptography Standardization Process by NIST.
